

Dr. William Stokes,

I am a medical student. I am dedicating my life to protecting and saving life. I am therefore frustrated at recalcitrance in accepting non-animal methods of toxicity testing in the name of protecting human health. We can be protecting people without hurting animals. Using in vitro tests only to determine a starting dose for animal tests simply isn't good enough. Please immediately adopt non-animal replacements for acute toxicity tests, and please make sure that non-animal tests are mandatory under the HPV program. Thank you.
